- Easy to operate
- Maximum energy efficiency
- Easily adaptable to **automated** processes
- Designed for continuous **industrial operation**

The BOY XS is a development from BOY – an injection moulding machine designed with **well-proven technology** and all the merits of our larger machines.

The difference: the BOY XS is even **more compact** and thus offers new possibilities for micro and sprueless single-cavity injection moulding.

The BOY XS facilitates **optimal automation solutions** from granules right up to the finished and packaged moulded part. The benefit for you: **cost effectiveness** combined with a **supreme level of precision**. The cantilevered clamping unit allows better accessibility and automation.

The intelligent design is ideally suited for the requirements of micro injection moulding. **A 12 mm plasticizing unit assures shortest residence times – a great advantage for considerate processing of temperature-sensitive materials. The highly demanding production process with the 8 mm screw - which must always be considered in detail from application to application - requires the attention / compliance of the process-relevant injection moulding parameters.**

The innovative and **multi-patented** Procan ALPHA® control provides for absolute precision and repeatability with **easy operability**.

BOY´s well-established, cantilevered two-platen clamping system reduces the space requirement to a minimum. The two **diagonally arranged** tie bars provide optimal access to the plasticizing unit, mould area, and ejector.

More machines in smallest space – this is possible with the BOY XS. The following picture makes this clear.

1. The machine design features the best ergonomics and efficient operation.
2. The ejector chute, open on three sides, guarantees optimum removal of the moulded parts. Optional: Stainless steel drawer in the trip chute for safe collection of produced parts.
3. Easy handling and flexibility with regard to additional equipment due to the cantilevered clamping system.
4. Optimum control technology with intuitive operation concept.
5. Robust machine design with integrated oil tank.
